Education

Indian Institute of Technology Bhilai

2024 – 2028

B.Tech in Electrical Engineering

CGPA: 8.51/10

Technical Skills

Programming Languages: C++, Python, JavaScript, TypeScript, C

Backend & Databases: Node.js, Express.js, FastAPI, REST APIs, PostgreSQL, MongoDB, Supabase

AI / ML & Core CS: PyTorch, OpenCV, HuggingFace Transformers, LLMs, RAG, Semantic Search, CNNs, Vision Transformers, Multimodal Learning, Data Structures & Algorithms, OOP, DBMS

Developer Tools: Git, GitHub, Docker, Linux, Postman, CI/CD

Projects

IPL Verse — Full-Stack Daily IPL Gaming Platform

[Live](#) [GitHub](#)

- Built and shipped a public, full-stack daily gaming platform for IPL fans from a raw ball-by-ball JSON dataset to a live product with an active user base; features include multiplayer Arena battles, Connections, Higher or Lower, Guess the Player, and Daily Gauntlet.
- Designed the application end-to-end with Next.js App Router, Supabase/PostgreSQL, and Server Actions, supporting authentication, leaderboards, achievements, and real-time multiplayer gameplay across 7-round matches.
- Engineered an AI content pipeline (Groq API) that generated and curated 3,600+ trivia questions with Sentence Transformer deduplication cutting redundancy by 70%+, using historical Cricsheet ball-by-ball data to power in-game analytics and stats.

API Forge AI — Agentic SDK Generation Platform

[Live](#) [GitHub](#)

- Built a multi-agent LangGraph platform (Planner, Validator, Diagnoser, Coder, Executor) that converts OpenAPI specs into production-ready SDKs with self-healing code correction; stack: FastAPI, Next.js, PostgreSQL, Docker.

Experience

Founder — Optisense AI

December 2025 – Present

MeitY GENESIS Entrepreneur-in-Residence (EiR), IIT Bhilai

- Selected for the competitive MeitY GENESIS EiR program and secured a **Rs 10 lakh startup grant** to develop AI-driven vision sensing systems for smart infrastructure applications.
- Own the full product lifecycle — architecture, backend system design, AI inference pipelines, and Dockerized deployment — building scalable, low-latency vision intelligence modules for constrained edge and cloud hardware.

AI/ML Research Intern

May 2025 – January 2026

Visual Intelligence and Learning Lab, IIT Hyderabad

- Reproduced and benchmarked DaViT and GenAD models on real-world sensor datasets, documenting generalization behavior across distribution shifts; implemented 3D Gaussian Splatting for neural rendering and dynamic object removal under deployment-constrained latency and memory budgets.
- Built a modular BLIP-based Visual Question Answering pipeline on BDD100K with custom annotation tooling and evaluation harnesses, enabling rapid iteration across model configurations. [\[Live Demo & Model\]](#)

Team Member — AEGIS, Financial Intelligence Platform- Pathway

Oct 2025 – Dec 2025

Inter IIT Tech Meet 14.0, IIT Patna

- Part of an 8-member team that architected AEGIS, a multi-agent trading platform (Redis/Pathway streaming, FinRL/PPO, GPT analyst agents, debate-based reconciliation, Alpaca paper execution) via a 7-stage pipeline with SHAP/LIME explainability; shipped a Next.js/FastAPI dashboard with Dockerized services and CI.

Achievements & Positions of Responsibility

- **3rd Place, Pathway Hackathon** (Pathway Inc., USA) — built a real-time financial analytics platform using Pathway's streaming tools; **2nd Place, TechSprint** (Google Developer Groups) — built a Flutter-based, Gemini-integrated campus app.
- **AI/ML Lead, GDG & Core Member, DS&AI Club**, IIT Bhilai — led deep learning workshops, mentored 30+ peers, organized bootcamps, and authored adopted resources; also **Student Mentor** guiding juniors on coursework strategy for two semesters.
